PRESS RELEASE

1 **Higher efficiency, more sustainability:**
2 **FACIDO optimizes packaging process**

3 Efficient, sustainable and ergonomic: FACIDO GmbH, a subsidiary of
4 suki.international GmbH, is now focusing on tailor-made packaging solutions for
5 its customers. The logistics service provider for the DIY and specialist trade invested
6 in a complete on-demand packaging process. Thanks to the automated packaging
7 system, FACIDO can send each individual customer order in tailor-made cartons.
8 This significantly reduces the volume of cardboard and material consumption,
9 especially in the fast-growing B2C business. In addition, the Landscheid-based
10 company improved its packaging process in terms of efficiency and ergonomics.

11 "We used to work with standard cartons. Unfortunately, these are not optimal in
12 terms of material consumption, work steps and shipping quality," explains Ralf
13 Yilmaz, Head of Operations and Logistics at suki-group. Looking for alternatives,
14 the logistics service provider found the packaging experts from Packsize and the
15 Becker Group.

16 The complete solution immediately convinced FACIDO. "It has improved our
17 packaging process in terms of efficiency, ergonomics and sustainability," explains
18 Yilmaz. The focus of the optimization is the employee. He is relieved thanks to
19 automated processes: The dimensions of the ordered products are taken directly
20 from the merchandise management system to the cutting machine. The machine
21 produces a tailor-made carton for each individual order.

22 At the same time, the corresponding order items reach the packing station via the
23 product conveyor belt. This considerably reduces the carton volume and the
24 consumption of packaging and filling material. At the same time, dispatch and
25 transport handling are improved thanks to the volume reduction.

26 A vacuum folding table then lifts the carton. The FACIDO employee then only
27 inserts the articles into the carton before it is automatically closed with hot glue.
28 This means that the logistics service provider no longer has to travel between
29 product provision and the dispatch warehouse. "Thanks to the semi-automatic
30 packaging line, our employees are not only significantly relieved, we can also use
31 their skills more efficiently," explains Yilmaz.

32 FACIDO is currently using such a complete solution for articles in the sun protection
33 sector such as blinds and roller blinds. A second line packs carpets and sanitary
34 accessories. This serves both retail customers and end consumers who order from
35 the DIY store or directly from the manufacturer. "Packsize's innovative solutions
36 and distinctive technical and process know-how convinced us. We want to intensify
37 our cooperation even further in the coming months," says Yilmaz.

38 The service company FACIDO, with its headquarters in Landscheid and logistics
39 headquarters in Dreis-Brück, Germany, has set itself the task of specifically relieving
40 other companies of logistics and sales processes so that they can concentrate on
41 their core business. In the meantime, around 80 committed and competent
42 employees at FACIDO ensure smooth processes, satisfied customers and new,
43 creative ideas.
